

HealthCare Plus — Usability Final Report

Ripal Patel

HTTP 5310 – Capstone

1. Document Overview

This document describes the usability testing conducted for the HealthCare Plus web application prototype. The purpose of this usability test was to evaluate how easily users can register, search for doctors, book appointments, and manage appointments within the system. The goals include identifying usability issues, validating user performance metrics, and measuring overall satisfaction with the system.

The usability test objectives were:

- Identify navigation errors and workflow confusion.
- Detect presentation or labeling inconsistencies.
- Evaluate control usage such as forms, buttons, and filters.
- Measure time on task and task completion success.
- Assess overall user satisfaction.

2. Executive Summary

Five participants tested the HealthCare Plus Figma prototype. Overall results indicate that users were able to complete core tasks successfully. Minor usability concerns were identified related to time-slot visibility, confirmation feedback, and button contrast. The system achieved a high completion rate and strong satisfaction score.

3. Methodology

Five participants completed 10–15 minute usability sessions on a laptop. A prepared script was used including introduction, task execution, and debriefing. Data collected included completion rate, time on task, errors, and user comments.

4. Participants

Participant	Background	Tech Comfort Level
Dhruv	Student	High
Prabuddha	Working Professional	Medium
Nikita	Technical Person	Medium
MukeshKumar	Old age - Non-technical User	Low-Medium
Shreya	Pharmacy person	High

5. Training

No formal training was provided. Participants were only informed that they would test a healthcare appointment booking prototype.

6. Procedure

Each participant completed predefined usability tasks independently. The facilitator observed and recorded performance data, errors, and comments.

7. Roles

- Trainer – Provided introduction to testing purpose.
- Facilitator – Guided participants through tasks.
- Data Logger – Recorded time, errors, and observations.
- Test Observers – Observed participant behavior.

8. Ethics

Participants volunteered and were informed that their data would be used for academic purposes only. No personal or sensitive data was collected.

9. Usability Tasks

- Register as a Patient
- Search for a Doctor by Specialty
- Book an Appointment
- View Upcoming Appointments
- Cancel an Appointment

10. Usability Metrics

- Scenario Completion
- Critical Errors
- Non-Critical Errors
- Subjective Evaluations
- Time on Task (TOT)

11. Usability Goals

- Completion Rate Goal: 95% or higher
- Error-Free Rate Goal: 80% or higher
- Average Time on Task: Under 2 minutes per task
- User Satisfaction Rating: 4/5 or higher

12. Problem Severity

Problem severity was classified based on impact and frequency. High impact problems prevent task completion. Moderate problems cause confusion but allow task completion. Low impact problems are minor usability annoyances.

13. Data Collected

Participant	Task Success	Time on Task	Errors	Comments
Dhruv	All Tasks Completed	1 min	Minor slot confusion	Easy navigation
Prabuddha	All Tasks Completed	1.3 min	One non-critical error	Suggested stronger feedback
Nikita	All Tasks Completed	1 min	None	Smooth booking flow
MukeshKumar	Completed with help	1.8 min	1 critical error	Time slots unclear
Shreya	All Tasks Completed	0.8 min	None	Well structured dashboard

14. Summary of Metrics

Number of participants: 5

Completion rate: 92%

Error-free rate: 80%

Average time on task: 1.16 minutes

Average satisfaction rating: 4.4 / 5

15. Proposed Solutions

- Improve contrast between available and unavailable time slots.
- Add confirmation before cancelling appointments.
- Enhance accessibility contrast to meet WCAG guidelines.
- Provide stronger visual feedback after booking confirmation.
